

## PRODUCT FEATURES

---

### ANTIFREEZE SUPER ACTIVE

ANTIFREEZE SUPER ACTIVE, all engines used in cooling systems and solar energy systems consisting of high-quality anti-freeze solution additives. Prevents freezing in cold climates by lowering the freezing of the cooling water system, increasing the boiling point of the coolant to boil in hot climates, and will prevent the rise of thirst. Place the system to prevent heat transfer to the surface prevents the formation of harmful layers. The rate of 50% for maximum protection and is recommended for use all year round.

### FEATURES

- aluminum radiators, including air conditioning and heating system components are compatible.
- increasing the efficiency of the cooling system, the heat from the engine and extend the life of reserves.
- ensures the efficient operation of the circulation pump.
- all kinds of metal and alloys used in cooling systems prevents the formation of corrosive substances
- lowering the freezing point of the cooling water in cold climates due to expansion, prevents the formation of cracks and other damage.
- Prevents the formation of electrolysis.
- is compatible with all seals.

### WARNINGS AND PRECAUTIONS

- If prolonged contact with skin should be washed and rinsed thoroughly with soap and water
- the product as a result of contact with skin, consult with your doctor immediately if rash or irritation.

### TECHNICAL SPECIFICATIONS PACKAGING

Freezing point, 0C (50% water solution)	- 20
Boiling Point ° C	108
Specific Weight Kg / Lt (20/200C) 1	1,05
PH (100%)	8 - 9
PH (50% water) 9-10	9 - 10
Color	Green

### PACKAGING

1L	Plastic
3L	Plastic
16 kg	TIN
225kg	DRUM
