

PRODUCT FEATURES

FOUR SEASON ANTIFREEZE

FOUR SEASON ANTIFREEZE, developed for use in engine radiators rust, corrosion, wear and anti-foam additives, ethylene glycol based anti-freeze solution contains.

APPLICATIONS

In order to prevent water from freezing in cold weather • motor vehicles, the cooling water is added to the radiator.

- aluminum and other types of radiators can be used.
- The cooling system do not have any harmful effects on metals and rubber hoses. The freezing point of the mixture when mixed with water, 33% - 18 0C to 50% of the -37 0C mixed up preserves.
- according to the desired temperature of the mixture can be applied in various proportions.
- At the same time as lowering the freezing point of water, the boiling point of these mixtures can increase the boiling water prevents the radiator in the summer.

WARNINGS AND PRECAUTIONS

- If prolonged contact with skin should be washed and rinsed thoroughly with soap and water
- the product as a result of contact with skin, consult with your doctor immediately if rash or irritation.

TECHNICAL SPECIFICATIONS

Specific weight Kg/m ³ (20 ⁰ C)	1,120
Ph	7,1-7,3
Freezing Point -37 50% + water	-37
Freezing Point -18% 33 + Water	-18

PACKAGING

1L	Plastic
3L	Plastic
16 kg	TIN
225kg	DRUM
